Years ahead in research
and development...

**Now available:
The world's first hybrid target for 25m and 50m
pistol and small bore rifle!**

HS25/50 HYBRIDSCORE®

ISSF approval phase 1, 2 and 3

- Hybrid-System
(double IR beam and acoustic measurement)
- Contact-free shot measurement across the inner target plane
(no wear material)
- No parallax errors
- Sensational and consistent accuracy
- Many configuration possibilities (e.g. reinforced front frame for steel shell
and big bore projectiles, up to a maximum of 1500 Joules, $V_0 < 380\text{m/sec}$)
- Worldwide patent application
- Unbeatable price/performance ratio

As a result of our quest for continuous S25/50 quality improvements:
Production begins on the new hybrid target HS25/50!

HS25/50 HYBRIDSCORE®

How it works: When the projectile passes through the inner target plane, it is detected completely contact- and wear free by two independent HD-infrared beams. This new technology allows for projectile detection with the outstanding accuracy of a few hundredths of a millimeter. In the outer zone of the target plane the projectile is located by five independent sound transducers. The combination of the two detection methods gives the target an outstanding cost/performance ratio.

Since the measurement is taken at the horizontal target plane there is no risk of parallax errors when shooting at an angle on the target. The target can be used for small bore rifle as well as for small bore pistol (precision pistol and rapid fire pistol). In addition the target offers numerous configuration possibilities (e.g. reinforced front frame for steel shell and big bore projectiles). The target HS25/50 HYBRIDSCORE is compatible with all other SIUS-LON-systems. The current control-unit CU941 includes the complete software for all disciplines, distances and targets from 10 up to 300 meter. Existing 25-meter or 50-meter SIUS-LON-systems can be easily converted by only changing the target.

Technical Data

Target	Dimensions	Weight
HS25/50 HYBRIDSCORE®	67x78x16,5cm	~ 20kg
